

$$1. \neg a \vee b \vee \neg c$$

Only when $a=1, b=0, c=1$, Output = 0
else, Output = 1

$$\text{Perceptron: } \hat{y} = f(w_1 a + w_2 b + w_3 c + b)$$

$f(\cdot)$: activation function

w_1, w_2, w_3 : weights

b : bias term

use step function for $f(x)$,

$$f(x) = \begin{cases} 1, & x \geq 0 \\ 0, & x < 0 \end{cases}$$

When $a=1, b=0, c=1$, Output = 0

$$\hat{y} = f(w_1 + w_3 + b) = 0$$

$$w_1 + w_3 + b < 0 \quad \textcircled{1}$$

$$a=1, b=1, c=1 \quad w_1 + w_2 + w_3 + b \geq 0 \quad \textcircled{2}$$

$$a=1, b=1, c=0 \quad w_1 + w_2 + b \geq 0 \quad \textcircled{3}$$

$$a=1, b=0, c=0 \quad w_1 + b \geq 0 \quad \textcircled{4}$$

$$a=0, b=1, c=1 \quad w_2 + w_3 + b \geq 0 \quad \textcircled{5}$$

$$a=0, b=1, c=0 \quad w_2 + b \geq 0 \quad \textcircled{6}$$

$$a=0, b=0, c=1 \quad w_3 + b \geq 0 \quad \textcircled{7}$$

$$a=0, b=0, c=0 \quad b \geq 0 \quad \textcircled{8}$$

Combine $\textcircled{1} \sim \textcircled{8}$,

suppose $b=1 \rightarrow \textcircled{8}$

$$w_1 = -1, w_3 = -1 \rightarrow \textcircled{1}$$

$$w_2 = 1 \rightarrow \textcircled{2}$$

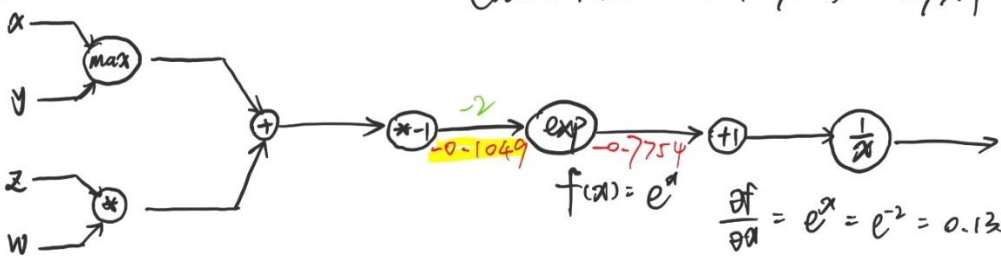

all requirements fulfilled.

$$\text{To sum up, } \hat{y} = f(-a + b - c + 1)$$

$$f(x) = \begin{cases} 1, & x \geq 0 \\ 0, & x < 0 \end{cases}$$

Chain rule: $1 \times (-0.7754) = -0.7754$

$(-1) \times (-0.1049) = 0.1049$
